## PUBLICATIONS

### Articles (as the first author)

- **Lai, D.**, Wu, S., Wang, H., Liu, D., Gu, T. & Zhang, Y. D. (2023+). TransTWAS: A Multi-tissue Transcriptome-wide Association Studies with High-dimensional Transfer Learning. *In Preparation*.
  - Applied a transfer learning algorithm to efficiently incorporate multi-site gene expression data for training gene expression prediction models in the target human tissue.
  - The transfer learning algorithm uses observations from the target model and external samples from different but possibly related regression models. Informative auxiliary samples are transferred to improve the learning performance of the target problem.

  - Collaborated with clinicians and wrote two papers. Used a modified self-controlled case series model to study the association between the onset of two adverse events and COVID-19 mRNA vaccination based a US health care database.

  - Extracted information from massive government press releases, evaluated the effectiveness of Hong Kong COVID-19 restrictions and provided actionable policy recommendations for Hong Kong government.

## WORK EXPERIENCE

### BeiGene Ltd.

Jul. 2023 – Dec. 2023

Research Intern

Shanghai, China

- Designed an R Shiny app that integrates multiple Bayesian methods to control covariate imbalance when borrowing information from historical clinical trials, accommodating various types of response variables such as binomial, survival, and continuous.
- The pipeline facilitates the borrowing of historical information, even in situations where only summary-level historical data is available.
